## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-30 are allowed.

The following is an examiner's statement of reasons for allowance:

Providing a regulated voltage which is less than a battery voltage to an implantable cardiac stimulation device, wherein the power consumption is below that of the directly connected battery to an integrated circuit of the device as claimed is not taught nor suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Thompson '454 discloses regulating a supply voltage to produce a voltage larger than the supply voltage for an integrated circuit of an implantable cardiac stimulation device.

Airey '050 discloses when the output voltage across first and second voltage terminals of a storage battery has a value equal to or exceeding a predetermined regulation value, the control circuit operates to produce a second signal condition at the base of the second output transistor to cause both of the first and second output transistors to operate in their non-conducting states and to terminate current flow to the control winding.

Art Unit: 3762

Lyden '760 teaches a battery output voltage will fall when charging a load using a switching power supply in an implantable cardiac stimulation device.
